

\$ongChainn × ZAO DAO

An invitation to sponsor and co-launch **Phase Two: The Music Marketplace**, where African music is streamed, battled, and owned onchain.

STREAMING

LIVE BATTLES

SONG COINS ON BASE

SOCIAL COMMUNITY

NON-CUSTODIAL

What \$ongChainn is

\$ongChainn is a music platform built artist-first. Fans stream full songs, build playlists, join live listening rooms, and back the artists they believe in. Every song in the catalog is minted as a coin on the Base network through Zora, which means a song is no longer just content. It is something a fan can own a piece of, trade, and champion.

Phase One built the audience layer: streaming, social feed, community, and taste. **Phase Two** switches on the marketplace: song coins, onchain verification, and live trading, all from inside the app with the user's own wallet.

Spotify lets you listen. \$ongChainn lets you listen, compete, and own.

WaveWarz Africa: the growth engine

WaveWarz Africa is \$ongChainn's live battle arena. Two artists, three rounds, real-time audience voting, live chat, and results on the spot. Battle audio runs on an X Space hosted by the battle host, so every single battle is also a public event on X that pulls new listeners into the app. Battles are currently set up across Zambia, South Africa, Nigeria, Zimbabwe, and Botswana.

THE CENTERPIECE

The \$ongChainn Loyalty Engine

Since Phase One, fans have quietly earned points for real activity: listening, liking, voting in battles, showing up. That loyalty was a promise waiting to be paid. In Phase Two we make those points real, permanent, and impossible to fake, stored onchain-adjacent on the server and awarded only for genuine activity. Then we turn them into ownership.

The fans who made a song popular get first access to owning it.

When an artist's song mints as a coin, the listeners who streamed, liked, and championed it are first in line: early and preferred access to that coin, plus battle rewards and status. Loyalty stops being a vanity score and becomes a real stake in the music.

WHY THIS IS FUNDABLE

One mechanic. Four winners.

For the audience

Their time turns into ownership. The grind of Phase One converts into early access to song coins, battle prizes, tiers, and an OG badge. Fans finally get upside for being early.

For artists

They can see and reward their real top fans, who now have skin in the game and become a built-in street team promoting every drop. Fan loyalty becomes measurable and monetizable.

For \$ongChainn

Retention and daily activity go up because every action counts toward something. The loop of listen, earn, own is what sets us apart from Spotify.

For ZAO DAO

You fund and co-own the mechanic that puts music ownership in fans' hands, the exact mission of the DAO. Your sponsorship becomes the reward pool and season prizes, your name is on the leaderboard and the launch season, and your artists get the first onboarding lane. Visible, onchain, mission-aligned.

WHY NOW

The product is built and launch-ready

Catalog live onchain

The music catalog is minted on Base via Zora. Trading runs through each user's own wallet. \$ongChainn never holds user keys or funds.

Loyalty Engine built

Server-authoritative points, tiers, an OG badge for Phase One fans, and a live Top Fans leaderboard are built and tested, ready to reward from day one.

Battles work today

Hosted battle rooms with live voting, chat, co-hosts, and X Spaces audio are built and integrated into the app.

Hardened for the public

Security audit on the data layer, non-custodial by design, and a full Terms of Use and Privacy Notice with recorded user consent.

THE PROVISION

How ZAO DAO can be part of it

We invite ZAO DAO to come in as founding launch partner of Phase Two. Sponsorship can take any of these shapes, alone or combined:

1. Power the reward pool

Sponsorship funds the Loyalty Engine's season rewards: song-coin allocations for top fans, battle prize pools, and creator bounties. Every dollar shows up as fan rewards inside the product, not overhead.

2. Present the launch season

"WaveWarz Africa and the Loyalty Season, presented by ZAO DAO" across battle rooms, the leaderboard, results pages, and X Spaces. Your name on the loudest, most shareable surfaces in the app.

3. Bring ZAO artists onchain

A dedicated onboarding lane for ZAO musicians: catalog placement, song coins minted, featured battles, and first-wave exposure to the \$ongChainn audience.

4. A seat at the launch table

A standing voice in launch decisions: reward-season design, battle scheduling, featured drops, and community programming, run with the DAO, not just for it.

THE ASK

Sponsor the launch. Help shape it.

We are deliberately not sending you a finished launch plan in this document. ZAO DAO knows how to move an onchain music community better than almost anyone, and we want that knowledge in the room before the plan is locked.

So here is the question we are putting to the DAO:

If this were yours to launch, how would you launch it?

Bring us your launch instinct: the channels, the moments, the artists, the sequence. Or, if you would rather hear our launch plan first and react to it, just say the word and we will present it to the DAO in full.

What happens next

- **Reply with your read.** How you would launch it, or a request to hear our plan.
- **We hold a live walkthrough.** A demo of the app, the battles, and the marketplace for DAO members, on an X Space or a call.
- **We agree the sponsorship shape.** Which of the four provisions above the DAO wants, and at what scale.
- **We launch Phase Two together,** with ZAO DAO named as founding launch partner from day one.

App: songchainn.xyz · Battles: WaveWarz Africa · Chain: Base · Protocol: Zora

This document is an invitation to partner, not an offer of securities or investment advice. Song coins are consumer collectibles traded by users through their own wallets on public networks.
